

PROJECT : Garage Management System

Scope Of Project

- Currently vehicle servicing management has become a tedious job.
- Small and medium scale garage, service centers have to manage data about customers, services offered to them.
- It is difficult for small scale businesses to maintain data for longer time as they are using paper based system.
- Customers also need to find nearest garage which provide authentic service.
- Using this system they will be able to maintain customer and services data.
- Also multiple services centers which are using the same system will be able to synchronize their work.
- We are also solving the problem from customer's end by making ease of choice.They can choose the service center nearby their location.
